1 Introduction

1.1 Benefits

- Misunderstandings between software users and developers are exposed.
- Missing services may be detected and confusing services may be identified
- A working system is available early in the process.

1.2 Techniques

Various techniques are used for rapid development:

- High-level language development: ASP.Net with C#.
- Database programming: SQL Server2000.
- GUI tools: Photoshop.

1.3 Components

- The front-end component provides the information retrieving/browsing/accessing functionalities, and is available for any site user.
- **The backend component** provides the data management functionalities that enable each stakeholder to enter/update/delete/publish data items.

Next sections provide samples of the prototype screens for both backend and front-end components.

2 Front-End Screens

Font-end of the youth module consists of three sub-modules that are Small enterprise, Electronic exhibition and related links for preparation of feasibility studies and Legal proceedings. Figure 1 shows the front end of **Youth Module**
